

Recombinant Influenza Hemagglutinin minus the transmembrane region (H10 Δ TM)

Catalog #: 1505-002

Description:

Recombinant, His-tagged influenza hemagglutinin from virus strain A/Jiangxi-Donghu/346/2013 (H10N8). Recombinant hemagglutinin (rHA) is supplied as an affinity purified protein. rHA is produced in Sf9 insect cells using baculovirus for expression and purified by FPLC.

Formulation & Storage: Supplied in 20 mM Tris (pH 7.4), 150 mM NaCl and 0.01% non-ionic surfactant. **Store at -20°C** for 2-3 weeks, -80°C for long term.

Notes & Usage Guidelines:

ELISA: N / A

WB: Assay-dependent dilution

Applications

SDS-PAGE and Western Blot Data:

(A) SDS-PAGE of rHA Δ TM under reduced condition: 1 μ g and 5 μ g (Lanes 1 and 2 respectively).

(B) Western blot detection of rHA at 50 ng (Lane 1), using an anti-HA (H10N3) polyclonal antibody at 0.5 μ g/mL and an anti-rabbit IgG-HRP conjugate, followed by TMB membrane substrate.

Certificate of analysis:

A hardcopy of datasheet is sent along with the products. Please refer to it for detailed information. For older lots, refer to the applicable certificate of analysis that may be requested at services@ibtbioservices.com

Related Products:

IBT provides a wide array of anti-filovirus specific antibodies, recombinant proteins, and other infectious disease reagents. Please see our website, www.ibtbioservices.com for more details.

Intended for research use only, not for human, therapeutic, or diagnostic applications.
